

LIFE SCIENCES MARYLAND

Jobs Analysis & Economic Impact Report 2011 • Jobs Analysis & Economic Impact Report 2011 • Jobs Analysis & Economic Impact Report 2011

A Maryland Department of Business &
Economic Development Research Report

*Measuring the job growth fueled by life
sciences research and development in private,
federal and academic facilities in Maryland
between 2002-2010*

Martin O'Malley, Governor
Christian S. Johansson, Secretary

HIGHLIGHTS

LIFE SCIENCES MARYLAND is a Jobs Analysis and Economic Impact Report conducted by the Department of Business & Economic Development.

KEY FINDINGS

- Maryland's life sciences leadership is the result of research preeminence in private companies, federal facilities and academia. The number of principal organizations conducting industry research and testing include:
 - 500+ Private Companies
 - 15 Federal Facilities
 - 16 Universities & Colleges
- Maryland leads the nation in university conducted life sciences research per capita
- The life sciences sector accounted for one-third of all job gains during 2002 to 2010
- 94% of all private life sciences jobs are in two areas: Research, Testing & Medical Labs (74%); and, Drugs & Pharmaceuticals (20%)
- Between 2002 and 2010, private life sciences salaries grew almost 50% from \$60,906 to \$91,034
- Health & Human Services is the largest federal life sciences employer in Maryland with 22,840 of the 29,777 federal jobs
- The Capital Region has the highest concentration of private (15,832) and federal (28,591) life sciences jobs; the Baltimore Region second largest cluster of private (13,994) and federal (1,186) jobs
- 96% of all federal life sciences jobs (28,591) are in the Capital Region (Frederick, Montgomery and Prince George's counties)

DIRECT IMPACTS

- Over 1,700 private sector establishments are directly involved in life sciences work - 5th highest concentration in the US
- Life sciences directly accounts for 71,600 jobs - 3% of all jobs in Maryland
 - 33,600 Private
 - 29,800 Federal
 - 8,250 Academic
- Maryland life sciences direct salaries total \$6.5 billion
- Average life sciences salary across sectors is \$91,100, 76% higher than the state's average
- 6% of Maryland's GDP – \$17.6 billion – is generated by the life sciences

SECONDARY IMPACTS

- Including direct, indirect and induced jobs, the life sciences support 160,030 jobs -- 6.5% of the state's total -- and equivalent to \$9.6 billion in salaries
- Life sciences activity support nearly \$500 million in annual income and sales taxes

INTRODUCTION

Among states, Maryland has been a national life sciences leader since the earliest years of this field due to the state's perennial leading position as a site for federal, academic and private life sciences activity. This report highlights the economic role and impact of life sciences in Maryland by explicitly recognizing the importance of each of these three categories.

Maryland's leadership position in life sciences research is driven by the research conducted in its world class federal, academic and private industry laboratories. The industry is a significant part of the \$14 billion in total research and development conducted in the state. Life sciences are also supported by the intellectual capital of university, government research and non-profit institutions.

DEFINITIONS

Life sciences can be described as how knowledge of life – from microbes to plants and animals to humans – can be applied broadly to improving human and animal health, the quality of food, and the protection of the environment. The interdisciplinary and interdependent nature of discovery in life sciences requires a wide variety of technologies to support this pipeline of development, including molecular biology, nanotechnology, engineering and software. In almost all disciplines, information technology becomes a critical tool to analyze the unprecedented volumes of data generated by high throughput screening, genomic sequencing and population studies.

We developed a definition of life sciences that spans the breadth of research, development and support activities. Along with private sector life sciences, we wanted to recognize the significant activity occurring at federal research centers and academic institutions in Maryland, resulting in a three-pronged definition. Our definition recognizes the principle that life sciences activity is not defined or distinguished necessarily by the products or services it creates, but is better characterized by the application and development of knowledge regarding the functioning of living things, such as plants, people or animals. Our definition excludes hospital and health care providers to the extent possible.

Private Sector Life Sciences Activity Definition Used in This Report

NAICS	NAICS Industry Title
Agricultural Feedstock and Chemicals	
325199	All Other Basic Organic Chemical Manufacturing
325221	Cellulosic Organic Fiber Manufacturing
325311	Nitrogenous Fertilizer Manufacturing
325314	Fertilizer (Mixing Only) Manufacturing
325320	Pesticide and Other Agricultural Chemical Manufacturing
Drugs and Pharmaceuticals	
325411	Medicinal and Botanical Manufacturing
325412	Pharmaceutical Preparation Manufacturing
325413	In-Vitro Diagnostic Substance Manufacturing
325414	Biological Product Manufacturing
Medical Devices and Equipment	
333298	All Other Industrial Machinery Manufacturing
334510	Electromedical and Electrotherapeutic Apparatus Manufacturing
334516	Analytical Laboratory Instrument Manufacturing
334517	Irradiation Apparatus Manufacturing
339112	Surgical and Medical Instrument Manufacturing
339113	Surgical Appliance and Supplies Manufacturing
Research, Testing and Medical Laboratories	
541380*	Testing Laboratories
541690	Other Scientific and Technical Consulting Services
541711	Research and Development in Biotechnology
541712*	Research and Development in the Physical, Engineering, and Life Sciences
621511	Medical Laboratories
621512	Diagnostic Imaging Centers

The DBED definition of private sector life sciences is based on standard industry categories to reflect core life science activities

** Many facilities/establishments associated with this NAICS industry code are not actually engaged in life sciences activity. DBED identified the appropriate portion to include using methods described in the complete report. Source: DBED analysis based on Battelle Technology Partnership Practice.*

MAJOR FINDINGS

Maryland life sciences directly accounted for 71,618 Maryland jobs in 2010. These consisted of 33,602 private sector non-academic jobs, 29,777 federal non-academic jobs and 8,240 jobs in higher education. The life sciences directly accounted for \$6.5 billion in aggregate wages and salaries in 2010. These include \$3.0 billion in private life sciences wages and salaries and \$2.8 billion in federal government life sciences wages and salaries.

Maryland's 71,618 life sciences jobs are in the private sector, federal government and academic institutions

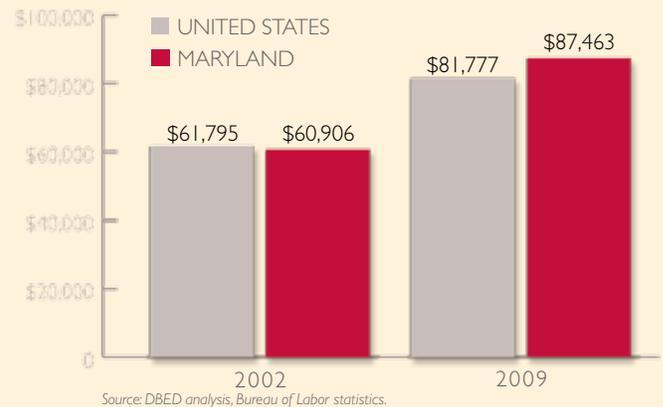

Private Industry

There are approximately 500 "core" life sciences companies in Maryland, engaged in biopharmaceutical discovery, research tools development, medical diagnostics and device development, as well as contract research and manufacturing organizations. These 500 companies are part of a broader network totaling over 1,700 establishments, including multiple facilities of medical labs, diagnostics and testing companies, specialized service providers and consulting services and direct suppliers of bio equipment. This private sector network accounted for 33,602 life sciences

jobs in 2010. Even though private life sciences accounts for a relatively small share of Maryland's economy (1.7% of the state's total private jobs), other factors highlight its importance to the economy. Among industrial sectors, life sciences enjoys one of the highest average worker salaries in the state and wages higher than the US average. In 2010, annual salaries in Maryland private life sciences were \$91,034 or 76% higher than the state average annual salary.

Maryland and U.S. Private Life Sciences Salaries 2002 and 2009

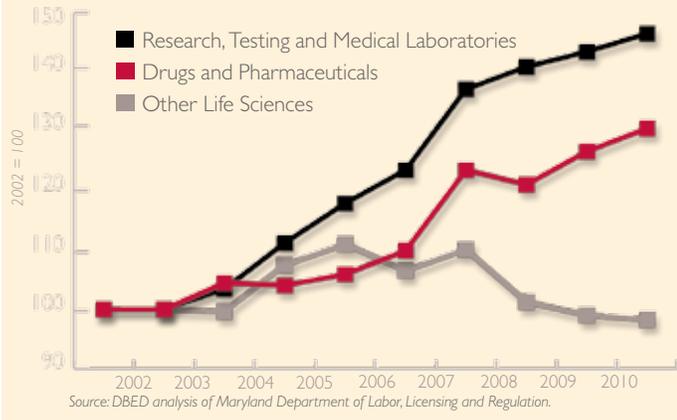

Maryland private life sciences salaries increased faster than U.S. private life sciences salaries 2002-2009 (44% vs. 32%)

Maryland private life sciences jobs are more highly concentrated in research, testing and medical laboratories than in the U.S. Nearly three-quarters of private Maryland life sciences jobs are in this sub-group, compared to roughly half of U.S. private life sciences jobs. On the other hand national life sciences employment is much more highly concentrated in medical devices and equipment and agricultural chemicals than in Maryland. Both in Maryland and nationwide, roughly 20% of private life sciences jobs are in drugs and pharmaceuticals.

Private life sciences jobs fall into four major sub-groups listed on page 1. The average size of research, testing and medical laboratories in Maryland is 16 jobs and the average medical devices and equipment facility has 23 jobs. Drugs and pharmaceuticals average over 100 jobs per facility, reflecting the presence of several major companies such as MedImmune with over 2,000 employees, BD Diagnostics with 1,600 employees and QIAGEN with 700 employees.

Since 2002 Maryland private life sciences has added jobs much faster than the state. This has been true both before and after the 2007-2009 recession. Maryland private life sciences employment stood 39% higher in 2010 than in 2002, compared to 20% growth nationwide. Remarkably, the life sciences sector accounted for over one-third of all of Maryland's job gains during 2002-2010. It did this, despite accounting for a mere 1% of all Maryland nonfarm payroll jobs back in 2002. Research testing and medical laboratories drove private life sciences job growth during 2002-2010. Thus subgroup grew at more than twice the rate of the rest of private life sciences combined and added more than five times as many jobs.

Maryland Private Life Sciences Job Growth Driven by Research and Testing 2002-2010

Maryland private life sciences jobs increased nearly 40% from 2002-2010

Maryland's concentration of private life sciences establishments is the 5th largest in the country, with a 20% higher concentration of life sciences establishments than the U.S. Maryland's concentration of private life sciences employment is the 9th largest in the country, with a 60% higher concentration of life science employees than the U.S.

Maryland Private Life Sciences Jobs, Salaries & Facilities 2010				
Sub-group	Employment		Facilities	Avg. Salary
	Jobs	Share		
Agricultural Feedstock and Chemicals	256	0.8%	22	\$63,780
Drugs and Pharmaceuticals	6,574	19.6%	65	\$102,084
Medical Devices and Equipment	1,962	5.8%	86	\$67,612
Research, Testing and Medical Laboratories	24,810	73.8%	1,579	\$90,239
Total	33,602	100%	1,752	\$91,034

Maryland's private sector life sciences jobs are largely found in research, testing and medical laboratories

Federal Facilities

The federal government serves an important role in promoting and supporting national life sciences activity. It is a major funding source for research and development primarily through the National Institutes of Health (NIH) and provides critical oversight and support for private sector life sciences. The Food and Drug Administration (FDA), for example, supports the federal drug approval process allowing private pharmaceutical manufacturers to bring new drugs to market. Federal grants and procurement for life science activities represented over \$1.5 billion in Maryland in FY 2010.

The government's own laboratories conduct much of the nation's most significant life sciences research in Maryland, while administering programs that furnish additional training and experience to young researchers. Federal labs actively promote the transfer of technologies they have developed or goods they have invented to the broader economy. These transfers encourage economic growth and support further development and R&D by both private and academic research organizations.

DBED estimates that federal laboratories and support facilities account for the second largest Maryland life sciences group with 29,777 jobs. The largest facility is the National Institutes of Health (NIH) headquarters and main campus in Bethesda, with 14,261 jobs. Including all of its five facilities, NIH accounts for an estimated 16,397 jobs or 55% of Maryland federal life sciences jobs. The second largest is the FDA headquarters in Silver Spring, with 5,745 jobs, or 19% of the state's federal life sciences jobs. The Department of Defense accounted for 4,614 jobs or 15% of the total.

Maryland Federal Life Sciences Research & Support Facilities	
Agency/Facility Name	Jobs
Department of Defense	
Aberdeen Proving Ground - Edgewood Campus*	550
Fort Detrick - Army Medical Research and Materiel Command	3,199
Walter Reed Army Medical Center Forest Glen Annex	865
U.S. Department of Health and Human Services	
National Institutes of Health	
NIH main campus	14,261
National Cancer Institute, Rockville	250
National Cancer Institute, Frederick	1,000
Biomedical Research Center, Bayview	636
National Cancer Institute - Center for Cancer Research	250
Center for Food Safety and Applied Nutrition	698
Food and Drug Administration	5,745
U.S. Department of Agriculture	
Foreign Disease-Weed Science Research Unit	53
Henry A. Wallace Beltsville Agricultural Research Center	1,700
Animal and Plant Health Inspection Service	150
Other	
National Institute of Standards and Technology*	270
National Biodefense Analysis and Countermeasures Center	150
Total	29,777

There are nearly 30,000 jobs at federal facilities in Maryland devoted to life sciences research

* Jobs listed represent DBED's estimate for employment accounted for by life sciences. Source: DBED.

Academic Institutions

Research funding is a vital component in the development and potential commercialization prospects of promising biopharmaceutical initiatives. Moreover, according to the Milken

Institute, the level of research funding is as an indicator of a region's future innovative capacity, as it aids in attracting companies, the appropriate workforce and necessary capital. University-based research is also an important component for the commercialization of research in the private sector.

In 2009 Maryland colleges and universities conducted \$1.45 billion in life sciences research and development. This ranked Maryland sixth in the country in academic life science R&D. At \$254 per person, Maryland institutions spent more intensively on life sciences research and development than any other state and over twice the national level. In 2009, Johns Hopkins University received \$738 million for life sciences R&D, including \$516 million for medical sciences and \$197 million for biological sciences.

R&D Expenditures at Universities & Colleges by Institution and Field: FY 2009 (\$ in 1,000)		
Institution	Total R&D	Life Sciences
Frostburg State University	215	215
Goucher College	269	197
Johns Hopkins University	1,856,270	787,092
Morgan State University	12,351	1,673
St. Mary's College of Maryland	338	157
Towson University	4,025	465
Uniformed Services U. of Health Sciences	192,268	188,911
University of Maryland Baltimore	359,542	359,542
University of Maryland Baltimore County	75,571	5,093
University of Maryland Biotechnology Institute	45,921	32,029
University of Maryland College Park	409,190	70,997
University of Maryland Eastern Shore	7,504	4,038

Research expenditures of \$1.45 billion at Maryland universities generate over 8,000 jobs

Source: National Science Foundation

An examination of academic life science R&D expenditures indicates that the direct economic impacts associated with life sciences research are considerable. We estimate that \$1.45 billion in life sciences research at universities and college supports approximately 8,240 jobs and \$694 million in salaries and wages.

RESEARCH METHODOLOGY

DBED based its definition for private sector life sciences activity on one presented by Battelle. Our review of possible model definitions found that some were overly broad and others were too narrow. Battelle struck a balance between the extremes. We applied the definition to the Maryland 2010

Quarterly Census of Employment and Wages, an official count of state and county aggregate wages categorized by NAICS code. We also used data from the 2007 Economic Census. This process allowed us to estimate private life sciences jobs and wages.

Federal life sciences is defined as activity occurring at Maryland federal centers for research and development or life sciences support. We identified 15 such facilities, mostly research laboratories. We then applied publicly available information to estimate direct federal non-contractor life sciences jobs and wages, arriving at a total of 29,777 jobs at those facilities.

Academic life sciences is defined as Maryland-based scientific activity meeting the National Science Foundation's (NSF) criteria for academic life sciences research and development. There is no official count of academic life sciences research and support jobs. Therefore we estimated these jobs and associated wages by applying 2009 NSF spending data on life sciences academic research and development to QCEW data, the May 2010 Occupational Employment and Wages Statistics and the proprietary IMPLAN® Regional Economic Model for Maryland.

DBED applied the above definitions to estimate direct Maryland life sciences jobs and annual salaries. The overall economic impact includes the indirect and induced effects, together known as secondary effects. Indirect effects encompass jobs at Maryland firms not considered life sciences firms, but which enable life sciences facilities to operate by supplying key supplies and/or services. Induced effects include jobs supported by the local spending of Maryland residents that work in life sciences. DBED estimated the secondary effects by applying the direct effect to the above-mentioned Maryland IMPLAN® model.

Including all secondary impacts, Maryland life sciences supported an estimated 160,030 jobs, \$9.6 billion in wages and salaries and \$500 million in tax revenues. The total job impact represents 6.5% of all Maryland jobs and 7.6% of all Maryland wages.

Further details regarding the methodology can be found in the complete report.

LIFE SCIENCE LEADERS

Joseph Amprey, III, M.D., PhD
Chief Business Officer

Dr. Amprey, serves as Chief Business Officer of Zyngenia, Inc., a biotherapeutics company, founded in 2008. Dr. Amprey, recognizing the need to develop better

therapies for patients suffering from life threatening diseases, focuses the company's development of next generation multi-specific antibodies.

Francis S. Collins, M.D., Ph.D.
Director, National Institutes of Health

Dr. Collins oversees the work of NIH, the largest supporter of biomedical research in the world, spanning the spectrum from basic to clinical research.

A physician-geneticist, he is noted for his landmark discoveries of disease genes and his leadership of the international Human Genome Project.

Carol Greider, Ph.D.,
Daniel Nathans Professor and Director of Molecular Biology & Genetics Johns Hopkins School of Medicine

Dr. Greider, a molecular biologist, won a Nobel Prize in 2009 for her landmark discovery of the enzyme telomerase, which maintains the ends

of chromosomes and protects them from damage. Her work has laid the foundation for novel studies connecting telomerase to human cancer and diseases of aging.

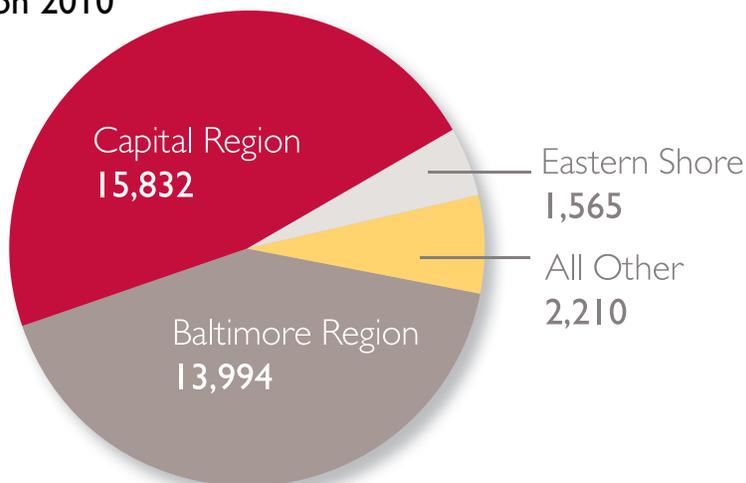

Johns Hopkins Medicine

Maryland Economic Impact of Life Sciences Activity 2010				
Quantity	Direct	Secondary Effects		Total
		Indirect	Induced	
Jobs	71,618	28,246	60,166	160,030
State Gross Domestic Product	\$17.6 Billion	\$7.2 Billion	\$12.2 Billion	\$37.1 Billion
Wages & Salaries	\$6.5 Billion	\$1.2 Billion	\$1.9 Billion	\$9.6 Billion
Wages & Salaries (Annual Average)	\$91,100	\$41,589	\$31,788	\$60,062

Including secondary impacts, Maryland life sciences supported an estimated 160,030 jobs and \$9.6 billion in wages and salaries
